

Logistics management app

Description of our Logistics App

This logistics app helps companies keep track of their products, drivers, and deliveries. It shows where the items are, helps plan the best routes, and makes sure everything gets to the right place on time. This helps businesses work faster and avoid problems.

The background of the slide features a dark, textured pattern of interlocking gears. A large, 3D-style blue question mark is positioned on the right side, partially overlapping the text.

**Why do we want to create a
logistics management app?**

To Fix a Problem

A logistics app can help in:

- Know where things are
- Get deliveries done faster
- Make fewer mistakes

Because Many People Need It

They need better ways to:

- Track orders
- Manage drivers
- Handle stock in their warehouse

CSS

**Who are we designing this
for?**

The background is a stylized illustration of a city skyline at dusk or dawn. In the foreground, several delivery vans and scooters are shown in motion. The vans are in various colors (red, white, orange) and have 'Delivery' written on them. The scooters are also in various colors and have delivery boxes attached to the back. The city skyline in the background features various skyscrapers and buildings. The sky is a deep blue with a few clouds and several airplanes flying. A small orange rectangle is in the top left corner.

Delivery Companies

- Companies that deliver goods (like food, parcels, or packages)
- Need help tracking drivers and deliveries

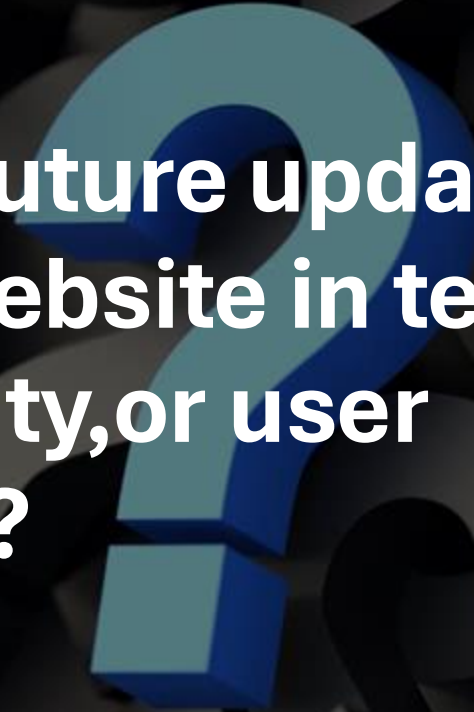

What needs does it fulfill?

The background image is a dimly lit library. It features tall wooden bookshelves filled with books, a large window on the left, and a study table with chairs in the foreground. A small potted plant sits on the table, and a sign with Chinese characters is visible. The overall atmosphere is quiet and scholarly.

Organizing Orders

- Keeps records of who ordered what
- Helps pack and ship the right items

**What improvements or future updates
that would improve the website in terms
of design, functionality, or user
experience?**

Better Communication

- Let drivers, customers, and managers stay updated
- Sends notifications or messages easily
